MATTHEW ALDOUS, B.Eng (Hons)

Melbourne, Australia | matthew.aldous@gmail.com | LinkedIn | 0488 059 124

Technical Lead | Cloud Engineering | AI & Automation | DevOps

SUMMARY

- Senior Engineer and Technical Lead with deep experience delivering enterprise software, cloud platforms, automation, and architecture across large-scale environments. Strong background in platform engineering, cloud delivery, release governance, production reliability, team leadership, and AI automation across education, FinTech, media, networking, customer data, and workflow systems.

CORE SKILLS

- **Cloud Platforms**: AWS, Azure, Google Cloud, cPanel
- **Platform Engineering**: Kubernetes, Docker, MicroK8s, EKS, release automation
- **Software Engineering**: TypeScript, Python, PHP, Bash, SQL
- **Frameworks**: Laravel, Vue.js, Node.js, Vite, Nx, React
- **AI and Automation**: OpenAI workflows, TensorFlow, PyTorch, scikit-learn, automation tooling
- **Observability**: OpenTelemetry, Grafana, Alloy, Sentry, structured logging
- **Data Engineering**: PostgreSQL, SQL, NoSQL, ETL, data pipelines
- **DevOps and CI/CD**: Azure DevOps, GitHub, pipelines, deployment automation
- **APIs and Identity**: REST, GraphQL, OAuth2, OIDC, SSO, MCP

CAREER HIGHLIGHTS

- Designed and deployed an ISO27001-aligned solution for **250+ schools and 100,000+ end users**.
- Delivered platforms supporting more than **$3 billion in capital** between brokers and lenders.
- Led engineering and solution delivery for platforms used by **major brands and regulated customers**.
- Built **AI-enabled data, analytics, and automation** for engineering and operational workflows.
- Engineered APAC gaming network and Australian CDN services for **millions of end users and viewers**.
- Authored the primary data analysis of **Australia's first 5G network** location and coverage maps.
- Connected the **first AFL and Melbourne Cup televised services** to the public internet.
- Co-founded Suburbia.net, one of Australia's **longest-running free public access systems**.

EXPERIENCE

Senior Engineer - Paperly - 2025 to Present

Paperly builds school administration and operations software for K-12 organisations.

- Engineered and supported workflow platforms for digital forms, excursions, and compliance.
- Delivered backend, identity, and release engineering across Laravel, Vue, TypeScript, and Kubernetes.
- Introduced observability, SSO, and diagnostics using Sentry, structured logging, and CI/CD tooling.
- Supported secure, reliable delivery across school-facing, multi-tenant education environments.

Senior Engineer - CitoPlus - 2024 to 2025

CitoPlus provides commercial loan processing software for brokers, lenders, and financial services workflows.

- Delivered DevOps and infrastructure across Azure, AWS, and Google Cloud.
- Introduced and coded OpenTelemetry tooling to improve session logging and root cause analysis.
- Delivered company-wide release methodology improvements and formalised KPI reporting practices.
- Supported secure platform delivery across regulated FinTech environments.

Solutions Director - Lexer - 2023 to 2024

Lexer helps enterprise brands activate customer data for segmentation, campaign execution and analytics.

- Directed technical delivery for enterprise customer solutions and data activation programs.
- Standardised tooling, automation, and knowledge systems to improve throughput and consistency.
- Expanded data and AI-informed practices for analytics, messaging, and operational decision-making.
- Supported enterprise customer outcomes across data, automation, integration, and platform delivery.
- Managed a team of 7 onshore and offshore developers across cross-functional delivery streams.

VC Consultancy, R&D Lead - LynkState - 2021 to 2023

LynkState transforms digital experience monitoring and customer data into insights for marketing campaigns.

- Provided architecture, engineering, and delivery support for scaling technology environments.
- Supported platform strategy, technical delivery, infrastructure decisions, and automation initiatives.
- Applied AI, analytics, and data workflow practices to improve insight and engineering productivity.
- Managed a 12-person offshore engineering team, reporting directly to C-suite stakeholders.

VC Consultancy, Network Engineering - SubSpace - 2020 to 2021

SubSpace provides real-time low-latency, reliable, secure connectivity for gaming, voice and video.

- Delivered network engineering solutions for high-performance gaming and media network services.
- Supported APAC network, CDN, and latency-sensitive delivery serving large-scale end-user traffic.

Senior Enterprise Architect - Telstra - 2008 to 2020

Telstra is Australia's largest telecommunications and digital infrastructure provider.

- Delivered architecture, operations, platform, and network engineering initiatives.
- Supported resilient infrastructure, operational tooling, data platforms, and production systems.
- Improved operational reliability, supportability, monitoring, and delivery practices.

EDUCATION

- Bachelor of Software Engineering (Honours) - University of Melbourne
